VERONICA KOPANICAK

(647) 462-5148 | vkopanicak24@gmail.com | linkedin.com/in/veronica-kopanicak

EDUCATION

Bachelor of Engineering in Engineering Physics | Minor: Nuclear Studies and Society
McMaster University – Hamilton, ON September 2024 – May 2029

TECHNICAL SKILLS

Programming & Computing	Python, MATLAB, Maple, Jupyter Notebook
Modelling & Simulation	COMSOL Multiphysics, Simulink, NI Multisim, Autodesk Inventor
Data Analysis	MS Excel, NumPy/SciPy, Statistical Analysis, Curve Fitting
Embedded Systems	Arduino IDE, Raspberry Pi (Linux), Digital Logic Circuits
Hardware & Lab Tools	Oscilloscope, Function Generator, Multimeter, Breadboarding, Soldering

RELEVANT EXPERIENCE

Design Studio Teaching Assistant – ENGINEER 1P13 September 2026 – Present
McMaster University – Hamilton, ON
- Guide first-year engineering teams through mechanical design, CAD modelling, and technical problem-solving.
- Troubleshoot Autodesk Inventor models and support students with design development and Python programming.
- Evaluate engineering design submissions for CAD accuracy, mechanical functionality, and adherence to project requirements.

Educational Research Assistant (Co-op) April 2026 – August 2026
FUSE Department, McMaster University – Hamilton, ON
- Contributed to developing a Python script using pandas to automate data cleaning and consolidation for future research use.
- Analyzed survey data using Excel, identifying trends and summarizing findings to support faculty research.
- Developed research databases and internal reports through comparative analysis of institutional policies.
- Conducted literature reviews and synthesized findings into research reports to support engineering education.

ENGINEERING DESIGN PROJECTS

EIT Biomedical Sensor Simulation
McMaster University – Hamilton, ON
- Modelled a 4-electrode handheld sensor and an 8-electrode wearable sensor using COMSOL Multiphysics to investigate electrical impedance tomography (EIT) for tumour detection.
- Conducted parametric simulations to investigate the effects of design parameters on the electrical response and detection capabilities of each sensor configuration.

Integrated Circuit Design
McMaster University – Hamilton, ON
- Designed and simulated a synchronous digital counter using JK flip-flops and a BCD-to-7-segment decoder.
- Assembled and tested the circuit on a breadboard, troubleshooting connections and verifying successful operation.

LEADERSHIP AND EXTRACURRICULAR EXPERIENCE

Co-VP Projects July 2026 – Present
Engineers Without Borders – Hamilton, ON
- Oversee the Energy and Recycling engineering project teams, providing direction and supporting progress toward technical project objectives.
- Establish project milestones, deliverables, and development plans to structure team activities and guide projects from concept toward implementation.

Recycling Project Team – Subteam Member November 2025 – June 2026
Engineers Without Borders – Hamilton, ON
- Contributed to recycling process research and early-stage design of a system converting PET bottles into 3D printing filament.
